

FREDERICK'S GROWTH FUND

321-829 NPO

Together we change lives

The first-ever treatment for achondroplasia is a breakthrough of both science and hope — offering children improved outcomes during the years when growth matters most. For the first time, therapy can directly address the biology of the condition, creating a rare and time-sensitive window of opportunity. Supporting access means more than funding medicine; it means giving children the chance to grow with possibility, dignity, and hope for a better future.
